

Abstract

Preparation of Antimicrobial Nitrogen Heterocycles Using Sustainable Processes [†]

Published: 6 December 2017

Libraries of compounds containing heteroaromatic rings and other nitrogen heterocycles were prepared from sugars and other readily available substrates using sequential scission-addition processes, which save time and materials with respect to conventional processes. Some of these compounds displayed remarkable antimicrobial activity.

Acknowledgments: This work was supported by the Research Program SAF-2013-48399-R, Plan Estatal de I+D, Ministerio de Economía y Competitividad, Spain, and European Social Funds (FSE). JJCT Thanks CSIC for a formation Contrat (Garantía Juvenil Programm). EAJ Thanks French Ministry of Higher Education for providing a grant internship.

Author Contributions: CCGM supervised the preparation of new antrimicrobial nitrogen heterocycles carried out by JJCT and EA-J using alcoxyl radical process; CCG and AJH supervised the chemistry carried out by CCG and NRP using new C-H activation processes.

Conflicts of Interest: 'The authors declare no conflicts of interest'
