

# Effect of Acute Seawater Temperature Increase on the Survival of a Fish Ectoparasite

Mary O. Shodipo, Berilin Duong, Alexia Graba-Landry, Alexandra S. Grutter, Paul C. Sikkel

## Supplementary Material

### Tests of Cox model assumption of proportionality

We tested the Cox model assumption of proportionality using the Global test statistic in the function “coxph” and “cox.zph” in the package “coxme” and graphically using a smoothed spline plot of the Schoenfeld residuals relative to time. For the Great Barrier Reef data, while the Global test statistic was significant for the unfed gnathiids ( $P < 0.0001$ , Table S3), only one covariate showed some evidence of proportionality ( $P = 0.0154$ ) and furthermore its Pearson's product-moment correlation coefficient ( $\rho$ ) was relatively low (Table S3); more importantly, the slope of the scaled Schoenfeld residuals versus time plot for unfed gnathiids was nearly zero and straight indicating the assumption of proportional hazards was indeed met (Figure S4) (Therneau and Grambsch 2000). Furthermore, as “significant” proportionality tends to make no difference to the interpretation of the data for large samples sizes (Therneau and Grambsch 2000), and since the sample size of unfed gnathiids was relatively large ( $n = 1113$ ), this suggests that our interpretation of these data is robust. The Global test statistic was not significant for the fed gnathiid model ( $P = 0.979$ , Table S4), and this was also supported by the Schoenfeld residuals plot (Figure S5).

### Tables

**Table S1. Philippines;** Average water temperature of aquaria for five treatments over three aquarium replicates for (a) Trial 1 and (b) Trial 2.

(a)	Treatment	Mean ± SE	(b)	Treatment	Mean ± SE
	28°C	28.1°C ± 0.09		30°C	29.9°C ± 0.04
	30°C	30.1°C ± 0.03		32°C	31.8°C ± 0.11
	32°C	31.7°C ± 0.12		33°C	32.8°C ± 0.04
	34°C	33.7°C ± 0.09		34°C	33.9°C ± 0.08
	36°C	35.9°C ± 0.13		35°C	34.9°C ± 0.07

**Table S2. Philippines;** Sample size of larval gnathiid isopods < 2 mm and > 2 mm in length in five different temperature treatments over three aquarium replicates for (a) Trial 1 and (b) Trial 2.

(a)	Treatment	Gnathiids <2mm n per treatment	Gnathiids >2mm n per treatment	All gnathiids n per treatment
	28°C	36	40	76
	30°C	39	40	79
	32°C	33	40	73
	34°C	30	40	70
	36°C	30	40	70
	Total	168	201	369

(b)

Treatment	Gnathiids <2mm n per treatment	Gnathiids >2mm n per treatment	All gnathiids n per treatment
30°C	31	33	64
32°C	31	32	63
33°C	27	32	59

(b)

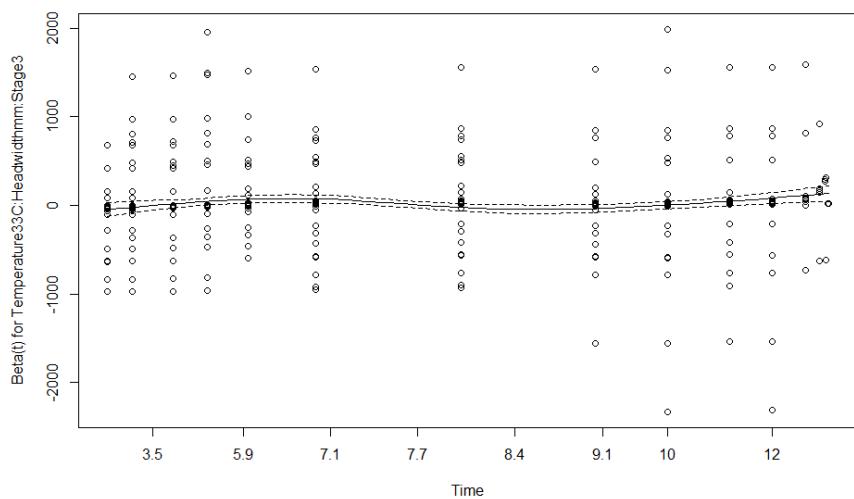

**Figure S1.** Seawater temperature for Great Barrier Reef data. a) Average temperatures in 2018 against long term average water temperatures (8 years). b) Actual daily temperatures for February 2018 (only February 1 to 23 was available). Source: Australian Institute of Marine Science. Accessed 13.11.2018 <http://data.aims.gov.au/aimsrtds/yearlytrends.xhtml>.

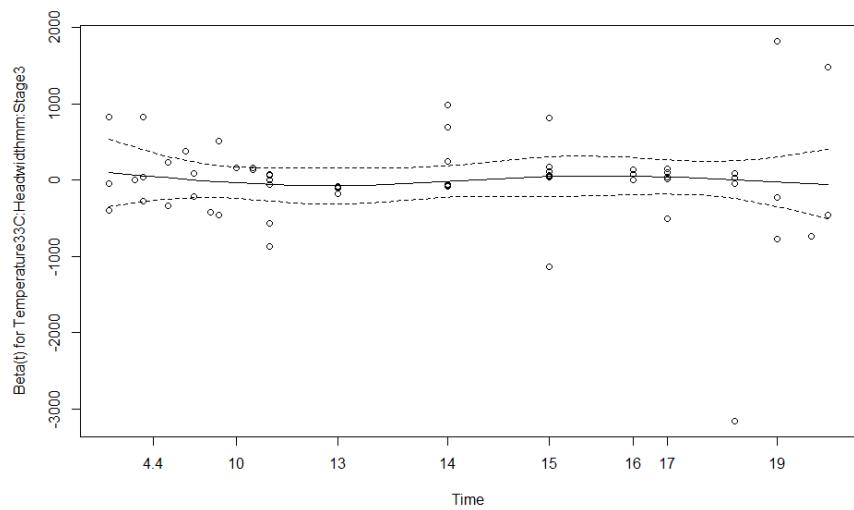

**Figure S2. Great Barrier Reef;** Temperatures, measured using a handheld device at 12:00 h, for three replicate aquaria per temperature treatment.

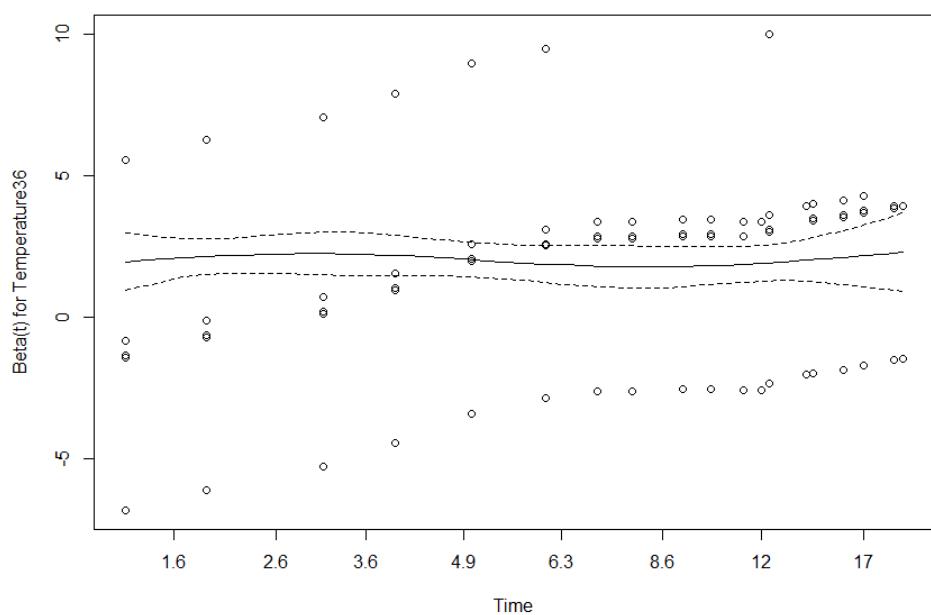

**Figure S3. Great Barrier Reef;** Water temperatures in an aquarium over duration of study for each of the temperature treatments between February 1 and March 2 2018. Temperatures were measured using HOBO Pendant temperature/light loggers, UA-002-08. Loggers were calibrated against the temperature probe which was calibrated to 26°C, 28°C and 30°C and NATA (National Association of Testing Authorities, Australia) certified.

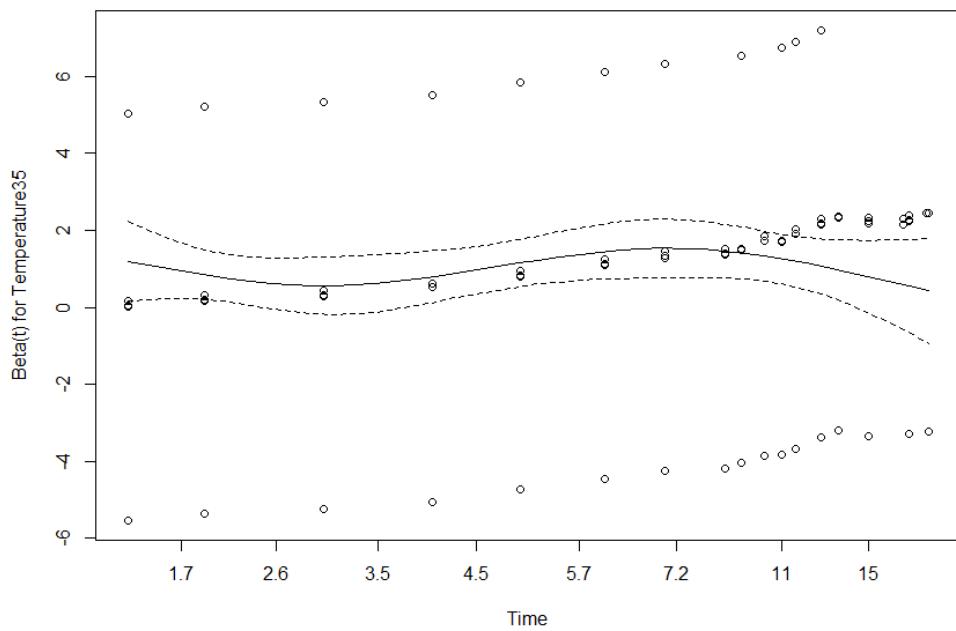

**Figure S4. Great Barrier Reef;** Scaled Schoenfeld residual plot for full model testing unfed gnathiid survival relative to time (days), obtained using the function “cox.zph”, transform = “km”. Smoothed spline with 90% confidence intervals.

**Figure S5. Great Barrier Reef;** Scaled Schoenfeld residual plot for full model testing fed gnathiid survival relative to time (days), obtained using the function “cox.zph”, transform = “km”. Smoothed spline with 90% confidence intervals.

**Figure S6. Philippines;** Scaled Schoenfeld residual plot for full model testing gnathiid survival relative to time (days), obtained using the function “cox.zph”, transform = “km”. Smoothed spline with 90% confidence intervals for Trial 1

**Figure S7. Philippines;** Scaled Schoenfeld residual plot for full model testing gnathiid survival relative to time (days), obtained using the function “cox.zph”, transform = “km”. Smoothed spline with 90% confidence intervals for Trial 2.
