**Dr. Hiran Marcelo Siqueira Da Silva**

Range Cattle Research and  
Education Center, University of  
Florida, Ona, FL 33865, USA

Deadline for manuscript  
submissions:

**10 September 2024**

### Message from the Guest Editors

Agro-industrial waste can pose a significant environmental challenge if environmentally friendly utilization methods are not explored. Utilizing by-products and residues from the agriculture industry presents an intriguing and feasible approach to supplementing ruminants during periods of forage scarcity, particularly when such residues are readily available and cost-effective. By-products derived from crop processing typically contain high levels of protein or sugar; occasionally, they may be rich in starch, while generally low in fiber. Thus, incorporating agro-industrial waste into animal feed can ensure a reliable nutrient supply for livestock, allowing them to efficiently convert these nutrients into animal-origin products. Moreover, leveraging agro-industrial waste facilitates the development of increasingly competitive, sustainable, and economically viable production systems.

In this Special Issue, new research articles, reviews, case studies, reports, and short communications are welcome. We will accept manuscripts from different disciplines related to this topic, including agricultural science, animal science, food science and technology, environment, and sustainability.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
