Deadline for manuscript submissions:

20 July 2024

# **Message from the Guest Editors**

The use of agricultural UAVs has become an essential part of modern agriculture due to their high operational efficiency. Current research on agricultural drone operations is rapidly developing in the direction of simulation calculation, environmental perception, multidimensional control, and precision operations. This not only improves the performance of agricultural drones in remote sensing, spraying, sowing, and pollination but also demonstrates their capabilities in more traditional agricultural fields.

The focus of this Special Issue is on simulation calculation, environmental perception, multidimensional control, and precision operations. The theme of this Special Issue is "Improving the operational effectiveness of agricultural UAVs," covering interdisciplinary research in agriculture, biology, electronics, engineering, and other fields. Operational drones in various applications, such as orchards, fields, cash crops, and ecosystems, all fall within the scope of this Special Issue. We welcome the submission of various types of articles, such as original research papers and reviews.

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. Agriculture is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

#### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q2 (Plant Science)
