Message from the Guest Editor

Dear Colleagues,

Considerable research has been done on conservation tillage systems under organic or regenerative practices. Much of the published research has focused on field studies located in Europe and the USA. This important work has continued and been expanded to include efforts on other continents and in different countries as well. It is appropriate and timely to publish a Special Issue in *Agriculture*, which highlights the progress made in developing strategies for the successful adoption of conservation tillage practices by organic farming researchers and farmers. I invite those working in this area to submit manuscripts summarizing results of this research for this Special Issue.

Dr. Patrick Carr  
*Guest Editor*

**Author Benefits**

- **Open Access:** free for readers, with publishing fees paid by authors or their institutions.
- **High visibility:** Indexed in the Emerging Sources Citation Index (ESCI - Web of Science) and other databases.
- **Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 35 days after submission; acceptance to publication is undertaken in 9 days (median values for papers published in this journal in 2016).
