Message from the Guest Editors

Dear Colleagues,

Consumers are demanding fresh-tasting and nutritious healthy processed foods for their nutrients and convenience, at an affordable price, which necessitates the development of new food processing techniques. The next generation of food processing technologies deals with the following health related parameters, such as increased dietary fiber, decreased calories, decreased saturated fat, no trans fatty acids, etc. New technologies need to be developed to tackle the above requirement in processed food development. The emerging processing technologies, such as high pressure processing, ohmic heating, non-thermal processing, minimal processing, irradiation, etc. are used in the food industries. Many of these technologies are not standardized yet and needed further research to enhance its suitability to particular application. This Special Issue covers various topics related to new technologies, methods and techniques used to enhance the foods of the future.

Author Benefits

Open Access: -free for readers, with publishing fees paid by authors or their institutions.

High visibility: Indexed in the Emerging Sources Citation Index (ESCI - Web of Science) and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 35 days after submission; acceptance to publication is undertaken in 9 days (median values for papers published in this journal in 2016).
