Deadline for manuscript
submissions:

30 September 2024

Message from the Guest Editors

This Special Issue titled "Cybersecurity and Artificial Intelligence: Current and Future Developments" provides a comprehensive exploration of the sophisticated relationship between cybersecurity and artificial intelligence (AI)

This Special Issue envisions the convergence of quantum computing, the blockchain, and AI, offering insights into the future of proactive threat hunting, automated incident response, and self-healing systems. The interdisciplinary nature of the contributions, spanning computer science, ethics, law, and policy, can stimulate discussion and discourse, making this collection an invaluable resource for academics, practitioners, and policymakers navigating the complex landscape of securing the digital realm in the age of AI. In essence, this Special Issue serves as a collection of knowledge, providing a universal perspective on the current state and future trajectories of the dynamic relationship between cybersecurity
