Design of New Metallic Alloys for AM

Guest Editor:

Prof. Dr. Pavel Krakhmalev

Department of Engineering and
Physics, Karlstad University, SE-
651 88 Karlstad, Sweden

Deadline for manuscript
submissions:

31 December 2024

Message from the Guest Editor

Additive manufacturing (AM) is a key technology enabling the development of future manufacturing systems. In recent years, there has been an increase in interest regarding the use of additive manufacturing (AM) technologies in different industrial applications. The development of AM manufacturing technology goes hand in hand with the development of novel high-performance metallic materials specially designed for AM. In this respect, theoretical predictions and experimental investigations of novel AM materials are of highest interest for the development of high-performance AM components. The Special Issue “Design of New Metallic Alloys for AM” aims to share existing theoretical and experimental knowledge concerning the development and properties of novel metallic materials designed for additive manufacturing.

The Special Issue invites submission of short communications, full-length articles and reviews dedicated to the development of novel commercial and experimental ferrous and nonferrous metallic alloys, intermetallic alloys, high-entropy alloys, and metal matrix composites. All AM methods suitable for metallic materials will be taken into consideration
