Message from the Guest Editors

Microfabrication and patterning techniques are gaining more importance. 3D bioprinting shows great deal of promise to revolutionize the field of tissue engineering and regenerative medicine, due to its ability to generate mimetic tissues and organs. It can only be realized by advancing bioink development in order to produce patient-specific scaffolds with inbuilt hierarchical structures and memory-shape properties, while offering enhanced biological properties. It's expected that this will allow the realization of the bioinspired design approach. Further more, 3D patterning of scaffolding materials is possible using spatially controlled light exposure and capillary force lithography on biological films and scaffolds to tune mechanical and degradation properties. For example, femtosecond laser induced two-photon polymerization is capable of producing 3D nanoscale patterns on hydrogel scaffolds with precise control of geometry. Protein structures can be patterned within the 3D hydrogels with nanoscale resolution to allow the incorporated chemical cues associated with the extracellular matrix. The Issue aims to cover the latest research findings and recent advances in the field.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo

Dipartimento di Fisica,
Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
