Deadline for manuscript
submissions:

closed (10 December 2020)

Message from the Guest Editors

Dear Colleagues,

With global climate change and the development of urbanization, good health is one of the important indicators to evaluate natural and human social sustainable development. Currently, robust and intelligent algorithms have been developed for multispectral and hyperspectral imagery processing. Long-term valuable information derived from remotely sensed data and health models have been playing an increasingly important role in understanding the relationship between health and eco-environmental factors. In addition, remote sensing and associated geo-statistical techniques also have particular potential applications in human health and urban sustainability.

This Special Issue of *Applied Science* aims to report the latest algorithms and applications for environmental and human health. We invite you to submit your recent research on remote sensing applications to health problems.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (Fluid Flow and Transfer Processes)
