Message from the Guest Editors

Dear Colleagues,

With rapid industrialization and urbanization in developing countries over the past several decades, the problem of air pollution has become aggravated, especially in the Asia-Pacific region. The degradation of air quality has had adverse effects on human health and the ecosystem. Moreover, air pollution causes climate change, which in turn influences air quality. Under these circumstances, this Special Issue aims to offer an opportunity to present scientific approaches, related to the Asia-Pacific region, for solving regional and global atmospheric issues, such as road-side and urban air pollution, wet and dry deposition, the long-range transport of photochemical ozone and PM_{2.5}, and climate change.

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank: CiteScore - Q2 (*Environmental Science (miscellaneous)*)
