Message from the Guest Editor

Dear Colleagues,

Basic (or q-) series and basic (or q-) polynomials are known to occur frequently in many diverse fields of mathematical and physical sciences. The recent overwhelming contributions toward the Rogers-Ramanujan, Jacobi's Triple-Product and Macdonald Identities, Mock Theta Functions, Rogers-Ramanujan Continued Fractions, and so on, together with the recent developments involving such basic (or q-) functions of Analytic Number Theory as (for example) the q-Zeta and related functions, cannot be over-emphasized. Thus, naturally, publication of a Special Issue of Axioms featuring invited articles in these and other related areas, especially in the year 2012 in which the world is celebrating the 125th birth anniversary of Srinivasa Ramanujan (1887-1920), would be a rather welcome and important event.

Prof. Dr. Hari M. Srivastava
Guest Editor

Author Benefits

- **Open Access**: free for readers, with publishing fees paid by authors or their institutions.
- **High visibility**: Indexed in the Emerging Sources Citation Index (ESCI - Web of Science), from Vol. 5, as well as MathSciNet, Zentralblatt MATH and other databases.
- **Rapid publication**: manuscripts are peer-reviewed and a first decision provided to authors approximately 31.5 days after submission; acceptance to publication is undertaken in 7 days (median values for papers published in this journal in 2016).
