Message from the Guest Editors

Dear Colleagues,

Increasing public awareness of healthy lifestyle has recently prompted the demand for foods with health-benefiting properties. Thus, probiotic functional beverages with attractive nutritional properties and therapeutic significance have gained importance. Besides dairy-based beverages, these products are also obtained from other matrices, such as cereals, soy, fruits, and vegetables.

This Special Issue will report on the scientific advances in the emerging area of functional probiotic beverages, focusing on commercially available products, as well as on the potential health benefits related to their consumption.
