Editorial Board Members' Collection Series: High-Resolution Fluorescence Microscopy and Epigenetics

Guest Editors:

Prof. Dr. Ranieri Bizzarri

Department of Surgical, Medical and Molecular Pathology and Critical Care Medicine, University of Pisa, Via Roma 65, 56126 Pisa, Italy

Prof. Dr. Andrew Clayton

Optical Sciences Centre, School of Science, Computing and Engineering Technologies, Swinburne University of Technology, Melbourne, Australia

Deadline for manuscript submissions:

15 December 2024

Message from the Guest Editors

Dear Colleagues,

As is widely recognized, chromatin affords a landscape where the activity state of the genome is modulated and perpetuated. Knowledge of the multiscale genome organization and multifaceted gene regulation is still in its infancy. Yet, techniques able to map genomic regions with increasing spatial resolution have made considerable progress in the last two decades. Among others, a crucial contribution was given by high-resolution fluorescence microscopy, particularly in the so-called super-resolution mode. Indeed, several fluorescence imaging techniques are intimately suited to address the meso- and nanoscale of chromatin organization by reporting on functional molecular parameters, such as the chemical identity, the concentrations, the molecular aggregations, the local chromatin topology, and the diffusion/binding processes.

In this Special Issue, we welcome original research or review articles related to all aspects of high-resolution fluorescence microscopy applied to investigate epigenetic mechanisms and chromatin remodeling, including studies on DNA methylation, modification of histones, the assembly of transcription machinery, and non-coding RNAs.

Institute, University of Valencia
and CSIC, 46980 Valencia, Spain

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Biology*) / CiteScore - Q1 (*General Agricultural and Biological Sciences*)
