### Message from the Guest Editors

Brain stimulation is one of the most rapidly expanding fields of research in contemporary neuroscience. This Special Issue covers all topics related to experimental findings aiming to better understand the mechanisms of action of the different neuromodulatory techniques, either invasive (e.g., deep brain or epidural stimulation) or non-invasive, such as transcranial magnetic stimulation (TMS), transcranial direct current stimulation (tDCS), transcranial alternating current stimulation (tACS), transcranial random noise stimulation (tRNS), and focused ultrasound stimulation.
