Message from the Guest Editor

Dear Colleagues,

Mild cognitive impairment is increasingly acknowledged as a risk factor for progression to dementia and, as such, has potential prognostic value. This Special Issue of *Brain Sciences* will discuss current methods (measurement, criteria) for the identification of mild cognitive impairment, and will examine potential risk factors for mild cognitive impairment. We welcome articles reviewing the identification and classification of mild cognitive impairment, describing new human and animal data, and emerging therapeutic interventions for the management of mild cognitive impairment. We hope we can count on your valuable contribution to make this a successful and impactful Special Issue for the journal.

Assoc. Prof. Andrea Loftus
Guest Editor

Author Benefits

**Open Access:** free for readers, with publishing fees paid by authors or their institutions.

**High visibility:** Indexed in the Emerging Sources Citation Index (ESCI - Web of Science), Scopus and other databases. Citations available in PubMed, full-text archived in PubMed Central.

**Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 32 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in this journal in 2016).
