Message from the Guest Editors

Dear Colleagues,

Mild traumatic brain injuries (mTBI) and concussions can cause a wide range of impairments that affect balance, cognition, vision, sleep, the autonomic nervous system, and mood. Treatment of mTBI may include cognitive, vision, and vestibular rehabilitation, as well as medications for sleep, mood, or headaches. We invite submissions for a Special Issue of *Brain Sciences* for articles related to treatment or complications of mTBI. Original basic and clinical research, case reports, review articles, meta-analyses, and systematic reviews related to this are welcomed. As research related to mTBI and concussion is quickly evolving, we hope to enhance the understanding of the complications of this condition and how they are treated.

Author Benefits

**Open Access**: free for readers, with publishing fees paid by authors or their institutions.

**High visibility**: Indexed in the Emerging Sources Citation Index (ESCI - Web of Science), Scopus and other databases. Citations available in PubMed, full-text archived in PubMed Central.

**Rapid publication**: manuscripts are peer-reviewed and a first decision provided to authors approximately 32 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in this journal in 2016).
