Message from the Guest Editor

Dear Colleagues,

Spinal cord injury (SCI) initiates a wide range of pathological events that adversely and permanently shape the overall quality of an individual's life. In addition to the well-known loss of sensory and motor function, as well as efforts to restore such loss, individuals who have suffered an SCI face a lifetime of lesser known health deficits, such as gastrointestinal and urogenital difficulties, sexual dysfunction and infertility, osteoporosis, altered immune function, metabolic syndromes, and depression, to name only a few.

The goal of this Special Issue is to provide a focus on these SCI-induced deficits, in terms of identifying both pathological mechanisms underlying their onset/maintenance, as well as describe novel ideas as to their potential treatment.

Raymond J. Grill, Ph.D.
Guest Editor

Author Benefits

- **Open Access:** free for readers, with publishing fees paid by authors or their institutions.
- **High visibility:** Indexed in the Emerging Sources Citation Index (ESCI - Web of Science), Scopus and other databases. Citations available in PubMed, full-text archived in PubMed Central.
- **Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 32 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in this journal in 2016).
