Facts about the MDPI Community

70 open access journals
70 staff at your disposal
4000 academic editors
15,000 articles published
26,000 e-mail alert subscribers
60,000 unique authors
150,000 academic peer-reviewers
600,000 monthly PDF views
2,400,000 monthly abstract views

Call for Papers

Call for Papers

Dear Colleagues,

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Buildings* (ISSN 2075-5309). *Buildings*, an international scientific open access journal on building science, building engineering and architecture, is published by MDPI online quarterly.

Manuscripts prepared in Microsoft Word or LaTeX can be submitted to the Editorial Office online at www.mdpi.com. Detailed instructions for authors are also available online: www.mdpi.com/journal/buildings/instructions/

Buildings is published in open access format—research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published.

Buildings is a new journal and publication fees are fully waived for papers submitted in 2012. However, a fee of 250 CHF may apply for those articles that need major editing and formatting and/or English editing.

We would be pleased to welcome you as one of our authors.

Aims & Scope

Buildings is an international, peer-reviewed, open access journal (free for readers) that publishes original articles, critical reviews, research notes, and short communications on building science, building engineering and architecture design. There is no restriction on the length of the papers as we encourage researchers to publish their innovative ideas and results in as much detail as possible.

Additionally, we encourage authors to publish related electronic files or software along with their publication as “Supplementary Material”. To guarantee a rapid refereeing and editorial process, *Buildings* follows standard publication practices in the natural sciences.

The scope of *Buildings* includes:

- architecture
- architectural/building engineering
- design
- building construction
- building materials
- energy and buildings
- building operations
- building physics
- building structures
- building mechanical systems
- building lighting systems
- green buildings
- building/facility management
- the philosophy, art and science of architecture designing
- the linkages and interactions between the built environment and ecology, natural resources, climate, local communities, public policy, and economic development

Buildings regularly publishes special issues on relevant and timely topics. Be sure to check our website for an updated list of special issues: www.mdpi.com/journal/buildings/

Open Access. What Does It Really Mean?

Open access is mainly a response to what is known as the serials crisis: yearly increasing journal subscription prices, which make subscription-based journals increasingly difficult to afford.

Many university libraries around the world have had to cancel existing subscriptions, or are unable to keep up with subscribing to new journals, because the cost of publication has risen disproportionately to their budgets.

With open access publishing, the cost of peer-review and production of an article is borne by the institute of the author by payment of a one-time flat fee. Conversely, readers and their institutes are no longer charged for accessing the journals they need.

For researchers, open access brings the convenience of immediate access to the literature that they need—no matter for which university or company they work, or whether they just want to read a paper in their spare time at home.

For authors, open access means a much wider circle of readers due to the easy access to their research papers. The interested general public is also able to access research works, giving higher transparency to the outcome of taxpayer money spent on research.
