Message from the Guest Editor

Dear Colleagues,

Leukemia (leukaemia- British spelling) is a malignancy of the blood originating from immature leukocytes (lymphoid and myeloid). It is the most common form of childhood cancer (~1/3 of cases) and accounts for >44,000 new diagnoses and >22,000 mortalities annually in the US alone. Recent advances in both laboratory and clinic continue to improve the outcome for patients. This special edition of Cancers gives an opportunity to describe recent original research in the field of leukemia, the development or application of new platforms or insights, and/or reviews of the field. We are particularly interested in genomics, leukemia stem cell research, novel therapeutics, epidemiological studies and new biomarker studies. If you would like to discuss an idea for a paper before committing please contact the guest editor.

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science) and BIOSIS Previews. Citations available in PubMed, full-text archived in PubMed Central. Indexed in BIOSIS Previews, Scopus and other databases. In Scopus, papers published in Cancers in 2013 and 2014 have been cited 4.5 times, on average, in 2015 (SJR Scimago).

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 29 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in this journal in 2016).
