Message from the Guest Editors

Dear Colleagues,

Epigenetic alterations seem to play an important role during the development and progression of several types of cancers. Of current interest are all epigenetic mechanisms, such as shifts in DNA methylation patterns or alterations in microRNA expression, that contribute to the progression of cancer.

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science) and BIOSIS Previews. Citations available in PubMed, full-text archived in PubMed Central. Indexed in BIOSIS Previews, Scopus and other databases. In Scopus, papers published in Cancers in 2013 and 2014 have been cited 4.5 times, on average, in 2015 (SJR Scimago).

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 29 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in this journal in 2016).
