Dear Colleagues,

Immunohistochemistry is a pivotal tool allowing to quickly perform the diagnosis of many cancers, but also to establish the prognosis of some of them. More recently, IHC, through the use of new biomarkers, can be predictive of responsiveness of some targeted therapies. In this latter field, a couple of antibodies have been developed and can be routinely used to predict the efficiency of drugs targeting some genomic alterations; not only some mutations, but also some rearrangements. This Special Issue will highlight the current development of IHC in cancer: it will provide, i) a practical approach in the interpretation and immunohistochemical selection of lung/pleura-based neoplasms obtained from small biopsy and cytological samples, ii) the use of new predictive biomarkers which can provide results essential for timely and accurate therapeutic decision making in the era of the so called stratified medicine, iii) some algorithms using IHC for improvement of CUP diagnosis, and iv) the interest to get accreditation in IHC for a pathology laboratory to ensure a high quality level of the results.

Cancers is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science) and BIOSIS Previews. Citations available in PubMed, full-text archived in PubMed Central. Indexed in BIOSIS Previews, Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 4.14 days (median values for papers published in the first six months of 2018).
