Message from the Guest Editor

Dear Colleagues,

Tobacco use is associated with the development of cancers in multiple organ sites in humans. This volume will present the latest information on the epidemiology of tobacco-related cancers, the mechanisms by which tobacco carcinogens and co-carcinogens induce cancer in these organ sites, and strategies for the prevention of tobacco-related cancers. Particular emphasis will be placed on new developments in the epidemiology, carcinogenesis and prevention of tobacco-related cancers in the last 5 – 10 years. Authors are encouraged to submit original manuscripts and review articles on topics of relevance to the role of tobacco in the epidemiology, etiology and prevention of tobacco-related cancers.

Prof. Dr. Gary Stoner

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science) and BIOSIS Previews. Citations available in PubMed, full-text archived in PubMed Central. Indexed in BIOSIS Previews, Scopus and other databases. In Scopus, papers published in Cancers in 2013 and 2014 have been cited 4.5 times, on average, in 2015 (SJR Scimago).

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 29 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in this journal in 2016).
