Message from the Guest Editor

Dear Colleagues,

Enzymes are able to catalyze the most complex chemical processes under the most benign experimental and environmental conditions. In this way, enzymes could be excellent catalysts for a much more sustainable chemical industry. For industrial applications, enzymes have to be immobilized, via simple and cost-effective protocols, in order to be re-used for very long periods of time. From this point of view, immobilization, simplicity and stabilization are strongly related concepts. The preparation of optimal and cost-effective enzyme biocatalyst is the main topic of this special issue.

This Special Issue is devoted to:

- The critical revision of simple protocols for immobilization-stabilization of enzymes
- The improvement of functional properties of enzymes via immobilization and post-immobilization techniques.

Prof. Dr. Jose M. Guisan

Author Benefits

- **Open Access**: free for readers, with publishing fees paid by authors or their institutions.
- **High visibility**: indexed by the Science Citation Index Expanded (Web of Science), Scopus and other databases.
- **Rapid publication**: Manuscripts are peer-reviewed and a first decision provided to authors approximately 19 days after submission; acceptance to publication is undertaken in 7 days (median values for papers published in this journal in 2016).
