31 December 2017

Message from the Guest Editors

Dear Colleagues,

The use of solar light to carry out chemical reactions appears to be one of the most intriguing technologies in order to solve environmental and energy problems. Current research is no longer limited to the traditional TiO$_2$ semiconductor; indeed, significant progress has been made in the development of novel photocatalytic materials.

This Special Issue of Catalysts aims to present the state-of-the-art and advances in emerging materials used as heterogeneous photocatalysts for environmental remediation, conversion of solar energy to usable fuel, either by reducing CO$_2$ to carbon-based fuels or by reducing protons to hydrogen, green synthesis, and, in general, sustainable chemistry.

We are pleased to invite you to submit manuscripts for this Special Issue in the form of research papers, communications, letters, and review articles.

Prof. Dr. Eng. Giuseppe Marci

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.  
High visibility: indexed by the Science Citation Index Expanded (Web of Science), Scopus and other databases.  
Rapid publication: Manuscripts are peer-reviewed and a first decision provided to authors approximately 19 days after submission; acceptance to publication is undertaken in 7 days (median values for papers published in this journal in 2016).
