cells

an Open Access Journal by MDPI

Editor-in-Chief

Dr. Alexander E. Kalyuzhny

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on PubMed and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

-  **Open Access** Unlimited and free access for readers
-  **No Copyright Constraints** Retain copyright of your work and free use of your article
-  **Thorough Peer-Review**
-  **Rapid Processing and Immediate Publication upon Acceptance**
-  **Coverage by Leading Indexing Services** PubMed (NLM), Chemical Abstracts (ACS), EMBASE (Elsevier), SCIE
-  **No Space Constraints, No Extra Space or Color Charges** No restriction on the length of the papers, number of figures or colors
-  **Discounts on Article Processing Charges (APC)** If you belong to an institute that participates with the MDPI Institutional Open Access Program (IOAP)

Aims and Scope

Cells (ISSN 2073-4409) is an international, peer-reviewed open access journal that provides an advanced forum for studies related to cell biology, molecular biology, and biophysics. *Cells* publishes reviews, research articles, communication, and technical notes. We aim to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on paper length. Full experimental and/or methodological details must be provided. Manuscripts regarding research proposals and research ideas are particularly welcomed.

The scope of *Cells* includes:

- Transcriptomics, proteomics, and metabolomics, glycomics, lipodomics, interactomics, fluxomics, and biomics
- Organelles, cytoskeleton cell membrane, and the nucleus
- Cell growth and differentiation
- Cell signaling, adhesion, and movement
- Apoptosis
- Hematopoiesis and stem cells
- Cell mediated immunity and T-cell research
- Cell culture techniques
