## NF- $\kappa$ B in Cancer

Guest Editor:

**Prof. Dr. Neil D. Perkins**

Institute for Cell and Molecular Biosciences (ICaMB), Medical School, Newcastle University, Catherine Cookson Building, Framlington Place, Newcastle upon Tyne NE2 4HH, UK

Deadline for manuscript submissions:  
**closed (30 June 2019)**

### Message from the Guest Editor

NF- $\kappa$ B complexes, formed from a family of five NF- $\kappa$ B subunits, RelA (p65), c-Rel, RelB, NF- $\kappa$ B1 (p105/p50) and NF- $\kappa$ B2 (p100/p52) are generally held in an inactive form until induced by wide range of stimuli. In cancer, NF- $\kappa$ B activation only rarely results from direct mutation of the NF- $\kappa$ B or IKK subunits but most commonly arises either through mutation of upstream regulators leading to constitutive IKK activity or via effects of the tumour microenvironment.

This special issue will include both NF- $\kappa$ B's function as a driver of inflammation associated cancer and its function as an effector of oncogene induced malignancy. Also it will also cover the links between NF- $\kappa$ B and tumour suppressors and how these can lead to altered NF- $\kappa$ B behaviour, the mechanisms leading to aberrant NF- $\kappa$ B in cancer, the functions of the NF- $\kappa$ B subunits and consider, given the complexity of the pathway, the best strategies for targeting it to achieve new and improved cancer therapies.

## Editors-in-Chief

### **Prof. Dr. Alexander E. Kalyuzhny**

Neuroscience, UMN Twin Cities,  
6-145 Jackson Hall, 321 Church St  
SE, Minneapolis, MN 55455, USA

### **Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation  
Centre, The University of  
Copenhagen, Copenhagen,  
Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics and Molecular Biology*)
