HPV-Associated Malignancies: Screening, Prevention and Treatment

Guest Editor:

Dr. Santanu Dasgupta

Department of Medicine, The University of Texas Health North East MD Anderson Cancer Center, 11937 US Hwy 271, Tyler, TX 75708, USA

Deadline for manuscript submissions:

closed (1 February 2020)

Message from the Guest Editor

Dear Colleagues,

High-risk human papilloma virus (hrHPV) infection and associated malignancies are alarmingly increasing worldwide and the United States, particularly in young men and women. Emerging studies have identified many subtypes of HPV in addition to HPV-16 and HPV-18, which can potentially drive cellular transformation leading to malignancy. In this Special Issue, we invite articles covering various aspects of HPV-associated cancers, their current screening, prevention, and therapeutic strategies. Any relevant model systems developed to examine hrHPV-associated carcinomas are also welcome.

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. Cells encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics and Molecular Biology*)
