Deadline for manuscript submissions: 31 October 2017

Message from the Guest Editors

This Special Issue on polymer-based chemical sensors is devoted to the discussion and dissemination of the latest research in this quickly-evolving field. Emphasis will be placed on the preparation and applications of organic and hybrid polymers as sensing materials for the detection of chemicals of interest in solution and in the gas phase, in civil security and in the biomedical, food, environmental, and industrial fields, etc.

- Polymer chemosensors
- Piezoelectric sensors
- Chemomechanical sensors
- Electrochemical sensors
- Colorimetric sensors
- Fluorescence sensors
- Chemical sensor array
- Sensing of cations
- Sensing of anions
- Sensing of explosives
- Sensing of chemical warfare agents
- Sensing of biomolecules
- Sensing of pollutants

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.

High visibility: Indexed in the Emerging Sources Citation Index (ESCI - Web of Science), in Chemical Abstracts (ACS) and in INSPEC (IET).

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 35.5 days after submission; acceptance to publication is undertaken in 9 days (median values for papers published in this journal in 2016).
