Call for Papers

Dear Colleagues,

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Chromatography* (ISSN 2227-9075). *Chromatography* is an open access journal that covers all aspects of fundamental advances and applications in isolation and purification sciences.

Manuscripts prepared in Microsoft Word or LaTeX can be submitted online to the Editorial Office at www.mdpi.com. Detailed instructions for authors are also available online: www.mdpi.com/journal/chromatography/instructions/.

*Chromatography* is published in open access format—research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

*Chromatography* is a new journal and publication fees are fully waived for papers submitted in 2015. However, a fee of 250 CHF may apply for those articles that need major editing and formatting and/or English editing.

We would be pleased to welcome you as one of our authors.

Prof. Dr. Frank L. Dorman
*Editor-in-Chief*

Aims & Scope

Chromatography provides an advanced forum for separation and purification science and technology in all areas of chemical, biological and physical science. It publishes reviews, regular research papers and communications.

Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. There are, in addition, unique features of this journal:

○ Manuscripts regarding research proposals and research ideas will be particularly welcomed.

○ Electronic files and software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

○ Manuscripts concerning summaries and surveys on research cooperation and projects (that are funded by national governments) to give information for a broad field of users.

The scope of this journal includes but is not limited to:

○ Theory and methodology (theory of separation methods, sample preparation, instrumental and column developments, new separation methodologies, etc.)

○ Equipment and techniques, novel hyphenated analytical solutions (significantly extended by their combination with spectroscopic methods and in particular, mass spectrometry)

○ Novel analysis approaches and applications to solve analytical challenges which utilize chromatographic separations as a key step in the overall solution

○ Computational modelling of separations for the purpose of fundamental understanding and/or chromatographic optimization

Chromatography regularly publishes special issues on relevant and timely topics. Be sure to check our website for an updated list of special issues.
Open Access. What does it really mean?

Open access is mainly a response to what is known as the serials crisis: yearly increasing journal subscription prices, which make subscription-based journals increasingly difficult to afford.

Many university libraries around the world have had to cancel existing subscriptions, or are unable to keep up with subscribing to new journals, because the cost of publication has risen disproportionately to their budgets.

With open access publishing, the cost of peer-review and production of an article is borne by the institute of the author by payment of a one-time flat fee. Conversely, readers and their institutes are no longer charged for accessing the journals they need.

For researchers, open access brings the convenience of immediate access to the literature that they need — no matter for which university or company they work, or whether they just want to read a paper in their spare time at home.

For authors, open access means a much wider circle of readers due to the easy access to their research papers. The interested general public is also able to access research works, giving higher transparency to the outcome of taxpayer money spent on research.

Publication Ethics Statement

Chromatography is a member of the Committee on Publication Ethics (COPE). Chromatography takes the responsibility to enforce a rigorous peer-review together with strict ethical policies and standards to ensure to add high quality scientific works to the field of scholarly publication.
