Message from the Guest Editor

Dear Colleagues,

In recent years, various novel sensing technologies have increasingly emerged. Depending on the type, a sensor may capture different types of signals, such as light, sound, temperature, acceleration, and magnetic field, which reflect the status of the environments. By analyzing various information from different sensors, it is possible to continuously track and monitor the object's activities in large, complex areas, such as buildings, airports, highways, rail networks, and so on. Using these sensing technologies, the precision and accuracy of the activity detection will be greatly improved. The special issue is intended for collecting the newest original high-quality research results in all aspects regarding novel sensing technologies for activity detection, including protocols, architectures, systems, platforms, algorithms, modeling and simulation as well.

Prof. Dr. Li Zhuo

Message from the Editor-in-Chief

You are invited to contribute a research article, a comprehensive review or a software paper for consideration and publication in *Computers* (ISSN 2073-431X). *Computers* is an international, peer-reviewed, open access journal which provides an advanced forum for computer sciences. *Computers* is published in open access format—research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), dblp, Inspec, Ei Compendex, and other databases.

Journal Rank: JCR - Q2 (Computer Science, Interdisciplinary Applications) / CiteScore - Q1 (Computer Science (miscellaneous))
