Message from the Guest Editor

Dear Colleagues,

Breast imaging is one of the most exciting subspecialties in Radiology. Although x-rays were first used to image the breasts in 1913, Dr. Robert Egan developed the first mammograms using what he termed the “Egan technique” in the 1950s at The University of Texas MD Anderson Cancer Center. In the 60 years since Dr. Egan’s work, Breast Imaging has grown, evolved, and advanced to include other modalities, technologies, and techniques.

The Special Issue on "Breast Imaging" aims at bringing together a collection of recent research and review articles appealing to residents as well as seasoned radiologists. Submissions will be invited covering the basics of breast imaging for the detection of breast malignancy; newer technologies used in detection and diagnosis; and interventional techniques.

Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High visibility:** Indexed in the Emerging Sources Citation Index (ESCI - Web of Science), EMBASE (Elsevier) and Chemical Abstracts (CAS). Citations available in PubMed, full-text archived in PubMed Central.

**Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 32 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in this journal in first half of 2017).
