### Message from the Guest Editor

Dear Colleagues,

It is my great pleasure to introduce the Special Issue on “Gene Therapy”. In the 1990s, gene therapy was considered most promising and the perfect technology to develop medicines of the future. Today, an increasing number of clinical trials are in progress and several gene therapy-based drugs have been approved. It is therefore most appropriate to share the latest development with the scientific community in this special issue. As you will notice, the articles cover engineering of non-viral and viral vectors, gene therapy applications for various indications, such as cancer, hemophilia, AIDS, severe combined immunodeficiency and neurological diseases. Moreover immunotherapy, which has received a lot of attention recently, is presented in detail.

## Message from the Editor-in-Chief

*Diseases* is an international, peer-reviewed, open access, multidisciplinary journal that focuses on the latest outstanding research concerning diseases and conditions. Research articles, reviews, and other contents are released on the Internet immediately after acceptance. This journal aims to cover international conferences and symposia as new targets.

*Diseases* is increasingly gaining acceptance and visibility within scholars, and after only a few years of life, *Diseases* is now also covering specific topics with dedicated special issues. We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, ESCI (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Medicine, Research and Experimental)
