Important Note: The document contains a special issue announcement inviting contributions to a theme related to radio and radar signal processing. This special issue is open for citations with details about the editorial office contact and submission deadline. The editorial guidelines emphasize the focus on various aspects of radar and radio processing, including automated target detection, space-time adaptive processing, frequency agility, spread spectrum processing, synthetic aperture radar processing, target identification, and advanced signal processing algorithms. The message highlights the guest editors’ commitment to ensuring high visibility of contributions through indexing in relevant databases and rapid publication of accepted manuscripts. It also mentions the availability of open access for authors, with costs covered by institutions. The快速出版 is also highlighted, with manuscripts being reviewed within 27 days of submission and a first decision provided in 8 days (median value for papers published in 2016).
