Dr. Shady H. E. Abdel Aleem

Department of Electrical
Engineering, Valley Higher
Institute of Engineering and
Technology, Science Valley
Academy, Qalyubia 44971, Egypt

Message from the Guest Editors

Nowadays, there is an unprecedented deployment of large-scale integration of renewable energy sources (RES) in electrical power systems in response to technical, economic, and environmental developments, as well as political and social initiatives. If not properly assessed, excessive RES penetration may lead to various operational problems such as overvoltage, thermal overloading, power-quality problems, and system-protection problems. These problems occur when the system exceeds its hosting capacity (HC) limit. HC research is a key enabler for affordable, reliable, and renewable energy sources, so it is possible to transition away from traditional high-carbon energy sources. Therefore, it is imperative that novel solutions be sought to enable networks to cope with future developments to realize resilient distribution networks that can host the massive RES penetration while ensuring a safe and reliable electrical operation.

Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
