## Methods and Concepts for Designing and Validating Smart Grid Systems

Guest Editors:

**Dr. Thomas Strasser**

Electric Energy Systems, Center  
for Energy, AIT Austrian Institute  
of Technology, Giefinggasse 2, A-  
1210 Vienna, Austria

**Prof. Dr. Sebastian Rohjans**

R&D Division Energy, OFFIS e.V.,  
Oldenburg, Germany

**Prof. Dr. Graeme Burt**

Institute for Energy &  
Environment, University of  
Strathclyde, Glasgow, Scotland

Deadline for manuscript  
submissions:

**closed (31 October 2018)**

### Message from the Guest Editors

Due to the considerably higher complexity of cyber-physical energy systems, constituting power system, automation, protection, information and communication technology (ICT), and system services, it is expected that the design and validation of smart grid configurations will play a major role in future technology and system developments. However, an integrated approach for the design and evaluation of such systems incorporating these diverse constituent parts remains evasive. Validation approaches available today focus mainly on component-oriented methods. In order to guarantee a sustainable, affordable and secure supply of electricity through the transition to a future smart grid with considerably higher complexity and innovation, new design, validation and testing methods are required. Papers that present results related to the design and validation of smart grid systems are particularly welcome for this special issue.

Eudossiana 18, 00184 Roma, Italy

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (*Engineering (miscellaneous)*)
