Engineering and Center of  
Excellence in Nano Technology  
(CENT), King Fahd University of  
Petroleum and Minerals  
(KFUPM), Post Office Box 5040,  
Dhahran 31261, Saudi Arabia

Deadline for manuscript  
submissions:

**closed (18 June 2021)**

### Message from the Guest Editors

Dear Colleagues,

The utilization of fossil fuels is responsible for the accumulation of CO<sub>2</sub> emission in the atmosphere. In addition, the production of fossil fuel displays a declining trend. The worldwide community has committed to exploring and developing technology related to renewable energy sources in order to address these challenges. Apart from experimental investigations, entrophy and exergy analysis is also a suitable approach to evaluate the overall performance so long as the proper determination of the model delivers an accurate prediction of the process performance. Furthermore, the thermodynamic approach is economically attractive and time-effective. The development of renewable energy conversion technology shows promise regarding the ability to meet energy demands and maintain the environment. This Special Issue aims to facilitate advanced research related to the conversion process of renewable sources to produce energy, in terms of original research articles as well as review articles.

at Albany, 1400 Washington  
Avenue, Albany, NY 12222, USA

## Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

*Entropy* is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (*Mathematical Physics*)
