Message from the Guest Editors

Dear Colleague,

The development of mathematical techniques, combined with new possibilities of computational simulation, have greatly broadened the study of Non-Linear Lattices, a theme among the most refined and interdisciplinary of mathematical physics. This Special Issue mainly focuses on state-of-the-art advancements concerning the many facets of Non-Linear Lattices, from the theoretical ones to more applicable ones. The Non-Linear and discrete systems play a key role in all ranges of physical experience, from macrophenomena to condensed matter, up to some models of space discrete time.

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MathSciNet (AMS), INSPEC (IET), Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 33 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in this journal in 2016).
