Message from the Guest Editors

Dear Colleagues,

Current financial market structures and investment strategies are mainly driven by the ultimate goal of financial returns, without considering the impact on society. As evidenced by recent and past financial crises, losses suffered by market participants do not only affect investors, financial institutions, and markets. Instead, some of these losses trigger severe impacts outside the financial system thereby disrupting the activities of many environmental, social, and government structures. This Special Issue seeks to solicit original ideas and research materials on the development of innovative tools and instruments for technological financial platforms, institutions, and markets to address social, environmental, and governance problems alongside financial returns when making investment decisions.
