## Advances in the Measurement of Fuels and Fuel Properties

Guest Editors:

**Prof. Dr. Alistair M. S. Smith**

Department of Forest, Rangeland  
and Fire Sciences, University of  
Idaho, Moscow, ID 83843, USA

**Dr. Wade T. Tinkham**

Department of Forest and  
Rangeland Stewardship,  
Colorado State University, Fort  
Collins, CO 80523, USA

Deadline for manuscript  
submissions:

**closed (31 December 2022)**

### Message from the Guest Editors

Dear Colleagues,

This Special Issue solicits articles on recent advances of the use of laboratory, field, and remote sensing approaches to characterize the properties, arrangement, and quantity of fuels. We are open to all types of articles but Review papers and Technical Notes describing common or new approaches to measure fuel and fuel properties, are particularly encouraged. Topics are invited across the entire spectrum of fire science, including fuels in structural and wildland fire science environments.

### Keywords

- fuels
- remote sensing
- field measurements
- fuel properties
- chemical composition
- LiDAR
- drones
