Message from the Guest Editor

Dear Colleagues,

Magnetohydrodynamics (MHD) is a field of study combined by the fluid mechanics and electromagnetism. The flow of conducting materials are substantially influenced by the electromagnetic force. This mechanism has been widely applied to various industries. Related to these processes, it is necessary to investigate fundamental MHD flows such as natural convection, free-surface, rotational flows, as well as the flows in ducts or pipes. Nowadays, due to the developments of both the computational resources and its techniques, more complex MHD flows are now being investigated through numerical analyses. This Special Issue focuses on numerical techniques for analysing complex MHD flows, for instance, 1) the method of how to solve induction equations expressed by the magnetic field or the magnetic vector potential, 2) free-surface MHD flows, 3) stability analysis for MHD flows, 4) MHD flows caused by alternating magnetic fields (moving, rotating or oscillating magnetic field), and 5) high Hartmann number flows.

Message from the Editor-in-Chief

Fluids (ISSN 2311-5521) is an international journal on all aspects of fluids in open access format: research articles, reviews and other contents are released on the internet immediately after acceptance. You are invited to contribute a research article or a comprehensive review for consideration and publication in *Fluids*. The scientific community and the general public have unlimited free access to the content as soon as it is published. Please consider *Fluids* as an exceptional, exciting enterprise ready to reward your trust, attention, and active participation.

Author Benefits

Open Access: free for readers, free publication for well-prepared manuscripts submitted in 2018.

High visibility: Indexed in the Emerging Sources Citation Index (ESCI) - Web of Science and *Inspec* (IET) from Vol. 2.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 23 days after submission; acceptance to publication is undertaken in 5.74 days (median values for papers published in the first six months of 2018).
