Deadline for manuscript submissions:
closed (20 October 2022)

Message from the Guest Editor

Dear Colleagues,

Numerous neuropsychiatric disorders, endophenotypes, personality and neuroimaging traits share common genetic bases, which may underlie their common symptoms/characters, high rate of comorbidity, or common neuropathogenesis. However, these shared genetic factors have not been comprehensively and systematically investigated. The aim of this Special Issue is to collect the research findings on this topic. The reliable findings with independent self-validation, innovative study designs, cutting-edge analytic approaches, and/or at genome-wide scale are especially welcomed.

Message from the Editor-in-Chief

Genes are central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fastmoving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised.

Why not consider *Genes* for your next genetics paper?

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.
Journal Rank: JCR - Q2 (*Genetics & Heredity*) / CiteScore - Q2 (*Genetics*)
