naydin@njcu.edu

**Deadline for manuscript submissions:**

31 August 2017

**Message from the Guest Editor**

Dear Colleagues,

It is the aim of this Special Issue to enhance collaboration between geoscientists, geochemists, biologists, ecologists, toxicologist, epidemiologists, health professionals and other allied professionals and researchers to protect and mitigate both public and environmental health, and ultimately to increase public awareness about the consequences of humans’ daily activities. The topics of interest include, but are not limited to: (a) geochemical processes controlling environmental behaviour of toxic and potentially toxic elements and minerals; particularly source, distribution, dispersion, and bioavailability of the elements/minerals in surface environments; and (b) assessment and mitigation of environmental quality and public health in urban settings. In this Special Issue, we also welcome articles based on undergraduate research projects on urban environmental and medical geochemistry/geology, or projects emphasizing role of geology in human health.

**Author Benefits**

- **Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.
- **High visibility:** Indexed in the Emerging Sources Citation Index (ESCI - Web of Science), Scopus and other databases.
- **Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 32 days after submission; acceptance to publication is undertaken in 9.5 days (median values for papers published in this journal in 2016).
