and Engineering, University of  
Bologna, 40126 Bologna, Italy

Deadline for manuscript  
submissions:

**closed (30 April 2024)**

### Message from the Guest Editor

Dear Colleagues,

After two winters of COVID-19, in September 2022, an increase in cases has been recognized in data from the main countries in Western Europe. The situation in Africa or Asia is similar. The role played by new variants is also relevant. At the moment, we have no clear indications on the effect that these sub-variants will have on the disease severity.

We introduce this Special Issue, the purpose of which is to highlight problems and solutions related to the analysis of this multifaceted situation, predicting its outcomes and responding to the question posed in the title. Needless to say, we are looking for approaches based on scientific methods, that have the right balance between observation, logical reasoning and mathematical modelling. Attention will be primarily paid to papers employing an experimental design and making use of data and statistics, aiming to achieve the construction and use of models suitable for predictions and projections on the future developments of the COVID-19 pandemic and its impact on health services.

Prof. Dr. Marco Roccetti
