Message from the Guest Editors

Dear Colleagues,

The obstetric field provides a challenging arena for conducting good quality research. Recruitment may be hampered by the 24-hour, fast-paced, labour ward environment, and by the ethical concerns around intrapartum consent. Other research challenges include the low-incidence but serious outcomes of a primarily healthy population, the need for long-term neonatal follow-up, maternal disregard for her own health relative to that of the foetus and strong socio-cultural beliefs around childbirth. This Special Issue showcases examples of recent work where judicious trail design and methodology has addressed these obstacles, in defiance of the common misconception that non-evidence-based obstetric practice is acceptable.

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.

High visibility: Citations available in PubMed, full-text archived in PubMed Central

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 33 days after submission; acceptance to publication is undertaken in 7 days (median values for papers published in this journal in 2016).
