New Methods and Tools for Resilient, Efficient and Sustainable Organic Vegetable Production

Guest Editors:

Dr. Sergio Argento

CNR-ICB National Council of Research, Institute of Biomolecular Chemistry, Via Paolo Gaifami n. 18, 95126 Catania, Italy

Dr. Maria Grazia Melilli

CNR-IBE National Council of Research, Institute of BioEconomy - Via Paolo Gaifami n.18, 95126 Catania, Italy

Dr. Ferdinando Branca

Department of Agricultural Sciences, Food and Environment-Di3A, University of Catania Via Valdisavoia n. 5, 95123 Catania, Italy

Deadline for manuscript submissions: closed (30 July 2023)

Message from the Guest Editors

Currently, many consumers are health conscious and aware of food guality, food safety, and environmental protection, leading to increasing demand for organic fresh Numerous studies products. on organic versus conventional crops have shown that organic fresh produce has significantly less chemical residue, are richer in antioxidant compounds. Organic agriculture is more sustainable for the environment, favoring biodiversity and reducing soil erosion and water pollution. Moreover, organic agriculture is an eco-friendly system, able to fix CO2 into soils, decreasing the greenhouses gases emissions

The new challenge is to develop new tools and methods for resilient, efficient, and sustainable organic vegetable production, providing climate-resilient cultivars addressed to organic vegetable production systems to be used for organic growers, and the organic seed industry, providing much needed security both under current and future scenarios of climate change. Moreover, the research attention should be addressed also to the analyses of the effects of the organic methods on vegetables production and their quality from farm to fork, to meet the habits of consumers.

Editor-in-Chief

Prof. Dr. Luigi De Bellis

Department of Biological and Environmental Sciences and Technologies, Università del Salento, Centro Ecotekne, Via Provinciale Lecce Monteroni, 73100 Lecce, Italy

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank: JCR - Q1 (Horticulture) / CiteScore - Q2 (Horticulture)
