Message from the Guest Editors

The scope of this Special Issue has been broadened to address multilevel determinants and evidence of interventions across individual, family, educational, social settings or across communities or clinical contexts. We will pay special attention to how vulnerable and sociohistorically marginalized child and adolescent populations are targeted in interventions. In addition, sexual and gender diversity, neurodiversity, child and youths with disabilities and populations exposed to complex life conditions are of special interest. If the targeted interventions include family strengthening, clinical service delivery improvements, improvements in policy environment and understanding of CAMH at political levels as well as in communities, we would welcome novel and contextual findings and the appraisal of evidence related to these interventions.

Keywords

- child and adolescent mental health
- multilevel risk and protective factors
- multilevel interventions
- contextual factors
- LMICs

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
