Deadline for manuscript
submissions:

closed (9 August 2022)

Message from the Guest Editors

The COVID-19 pandemic has permeated every aspect of life on the planet. While the health impacts on individuals are the most obvious and heart-rending aspect of this disease, it has also had broader impacts on and been affected by the environment. The direct and indirect environmental costs and, dare we say, benefits of this pandemic are enormous. In a little over a year in this pandemic, we have seen how changes in economic activity have in some cases improved the environment, encouraged outdoor recreation where social distancing can be maintained, and revealed how environmental measurements, such as that of wastewater, can give early warning and forecast the rise and fall of the disease in the community. Equally important are the engineered and social environments that researchers have found to be important in controlling the spread of the disease. Sharing public policy ideas about monitoring virus and redesigning environments may be critical to ending the pandemic. We therefore invite researchers who have developed significant new knowledge or scholarly reviews on inter-relationships of the COVID-19 pandemic and the environment to submit papers.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
