Message from the Guest Editors

Due to the global trend of population aging, the needs of health promotion, health care, and long-term care for older adults have become challenging issues in aging societies. of disparity in health, health care, environmental health have been raised. Demographic and social determinants, such as age, sex, ethnicity, socioeconomic status, occupation, living area, and the development level of countries, are sources of income inequality. When healthy aging, successful aging, or active aging become the goal of an aging world, the inequality of health and health care needs to be solved. The purpose of this Special Issue is to highlight the issue of equity (or inequality) in health, health care, long-term care, environmental health, and quality of life in aging societies. We welcome manuscripts that discuss equity issues in health, risk factors to health, and use of health care for older adults and their families. We also encourage the study findings that can be translated to policy and/or practice suggestions, and thus research that can be applied to improving health and health care for aging societies

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase,

GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
