Message from the Guest Editor

Dear colleagues,

This special issue of the International Journal of Environmental Research and Public Health (IJERPH) focuses on current literature addressing sources of maternal and paternal exposure to endocrine disrupting chemicals and associations between parental exposure to endocrine disrupting chemicals with fertility, maternal health, birth outcomes, and infant and child development. Research examining disparities in exposure to environmental endocrine disrupting chemicals and their effects is especially welcome, although all investigations of parental endocrine disruptor exposure and reproductive endpoints in human populations will be considered.

Keywords: Birth outcomes; Endocrine disrupting chemicals; Fertility; Fetal development; Health disparities; Infant development; Reproductive toxicants; Vulnerable populations;

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
